

STORM SHIELD™ GUTTER PROTECTION

The panel melts and prevents property-damaging ice dams, the formation of dangerous icicles and heavy snow load. There's no longer a need to shovel and scrape away snow and ice. The perforated grate keeps leaves and debris from clogging gutters.

Storm Shield™ Gutter Protection

Thermal Technologies Inc., the leader in Innovative Roof De-icing systems, is excited to introduce Gutter Shield—The next generation in gutter protection! This incredible new heated gutter cover offers the highest levels of protection for your home, year round. Before now, consumers have had to choose between either dealing with debris clogging their rain gutters, or massive ice buildup as a result of using bulky helmet systems. The secret behind our Gutter Shield is 100% recycled aluminum alloy that focuses on direct heat transfer from commercial grade self-regulating heat cable to our extruded covers. Only Gutter Shield heats and clears your entire gutter—Guaranteed for life!

SPECIFICATIONS

Material Selection	♻️ Recycled Aluminum Alloy 6063 Temper - T5
Color	Aluminum Alloy or Anodized
Panel Size	5" x 60" (5 ft) for 5" wide gutters
Heating Systems	Commercial Grade-Self Regulating Heat Cable (6 Watt per foot in 100-130 VAC or 208-277 VAC). The Gutter Shield System requires 1 foot of Heat Trace per foot of panel.
Components	Snap in Gutter Panel
Optional Items	Ambient Temperature Sensor Controllers, Self regulating heat trace for downspouts
Electrical Requirements	N.E.C. 426-28 requires 30 mA Ground Fault circuit protection for snow and ice melting applications
